## Central Chapel Hill Estate.

Nestled at the base of Brisbane's Mount Cootha, Chapel Hill is one of Brisbane's most sought after residential locations. With relative close proximity to the city and larger than average residential allotments, Chapel Hill provides the semi rural setting and lifestyle that many seek today.

The Central Chapel Hill residential sub division has been developed by Doherty Grader Hire, with design by Development Consulting Pty Ltd, both Brisbane based operations.

The RibStruct drainage system was the product of choice by Gordon Doherty of Doherty Grader Hire.

The RibStruct system provided additional flexibility, longer lengths resulting in reduced laying times and coupled with the lightweight nature of the product, resulted in a considerable cost savings over that of traditional heavy drainage pipeline systems.

Everhard Industries Pty Ltd were able to supply the complete package of underground and aboveground drainage product including the RibStruct drainage pipe & fittings and precast concrete stormwater components.

#### Project Details:

## Brisbane City Council – City Works.

Presented with a problem not uncommon in ageing residential stormwater systems, the Brisbane City Council (BCC) chose Everhard Industries' RibStruct drainage system to alleviate their predicament.

Stormwater drainage lines blocked by tree roots are a costly problem for local authorities. Seeing as the blocked stormwater line in question in Brisbane's inner suburb of Taringa is directly below residential homes, access to the line so as to remove and replace it was impossible. A new line had to be laid parallel to the existing line, under the neighboring roadway, and laid quickly!

The RibStruct system provided additional flexibility, longer lengths, resulting in reduced laying times, and coupled with the lightweight nature and comparable strength of the product, the end result was a considerable cost saving over that of traditional heavy drainage pipeline systems for the BCC.

Everhard Industries Pty Ltd where able to supply the complete package of underground and aboveground drainage product including the RibStruct drainage pipe & fittings and precast concrete stormwater components.

APRIL 2002

With a strong profile and a national distribution network of branches, Mico Pipelines provide the ideal partnership for Everhard Industries and the RibStruct drainage system. Mico Pipelines have been appointed national distributor for the RibStruct drainage system range for New Zealand. This expands the market currently serviced by Everhard in New Zealand through Marley Plastics to incorporate the civil construction and agricultural sectors not previously targeted.

Everhard Industries are proud to be working with the Mico Pipelines team and have a high level of commitment to the ongoing growth in export business.

## Port of Brisbane – Visitors Centre.

The Port of Brisbane is the third largest capital city port in Australia.

The hub of the port's activity is the Fisherman Islands facility situated on 716 hectares of predominantly reclaimed land at the mouth of the Brisbane River.

Located by the lake on Whimbrel Street, Fisherman Islands, the Visitors' Centre offers visitors a number of unique experiences.

The installations of the infrastructure including roads, drainage and other essential services for the visitors centre was awarded to Civdec Constructions of Brisbane.

The project required the installation of a large number of drainage components with the specification calling for a quantity of class 4 drainage pipes. The access road to the visitors centre has been designed to cater for heavy vehicles to service future warehousing and logistics facilities.

RibStruct drainage pipe was selected for use in the main feed to the settlement ponds adjacent to the centre. Installation required the dewatering of the trench, with the RibStruct pipe to be installed into a region consisting of reclaimed sand and subject to a tidal water table generally at or above the pipes obvert
